

Make a Bowling Pin Set from Recycled Plastic Water Bottles

Prep Time: 15 minutes

Skill Level: Easy

Total Time: 35 + minutes

Materials:

- 10 plastic water bottles, all the same size. Make sure they are dry and empty.
- Felt or fabric totaling about 4 sheets.
- Felt numbers
- Glue (Hot glue or craft glue)
- Hot glue gun
- Scissors

Advice: We did find that the hot glue worked the better then other glue and kept the felt from peeling up.

Instructions:

1. Save or collect at least 10 water bottles of the same size. Make sure they are all dry and empty when ready to begin your project.
2. Cut 10 strips of felt (or fabric) about 10" long x 2" wide.
3. Find something circular about 2" in diameter. Cut around or trace & cut.
4. Cut 10 circles.
5. Lay out your strips and circles. Come up with the color combinations you like best.
6. Place hot glue all around the label and lay the felt strip on top. When you reach the other end, place a small amount of glue on the edge of the top of the felt strip. Cover with the other end of your felt strip and trim off any excess.
7. Place felt strips on all 10 water bottles. Make sure to keep your circles matched up with bases you choose for your color combinations.
8. Glue on the circles and allow base to dry.
9. Cut and glue the numbers on each pin. Once the numbers are dry, find a ball and begin to bowl!
